Overview - What These Screens Show

These six screens show the core surfaces of the Customer Lifecycle and Reverification Engine from a risk trigger firing in the background, through automated resolution or customer action, to the compliance review queue and audit log.

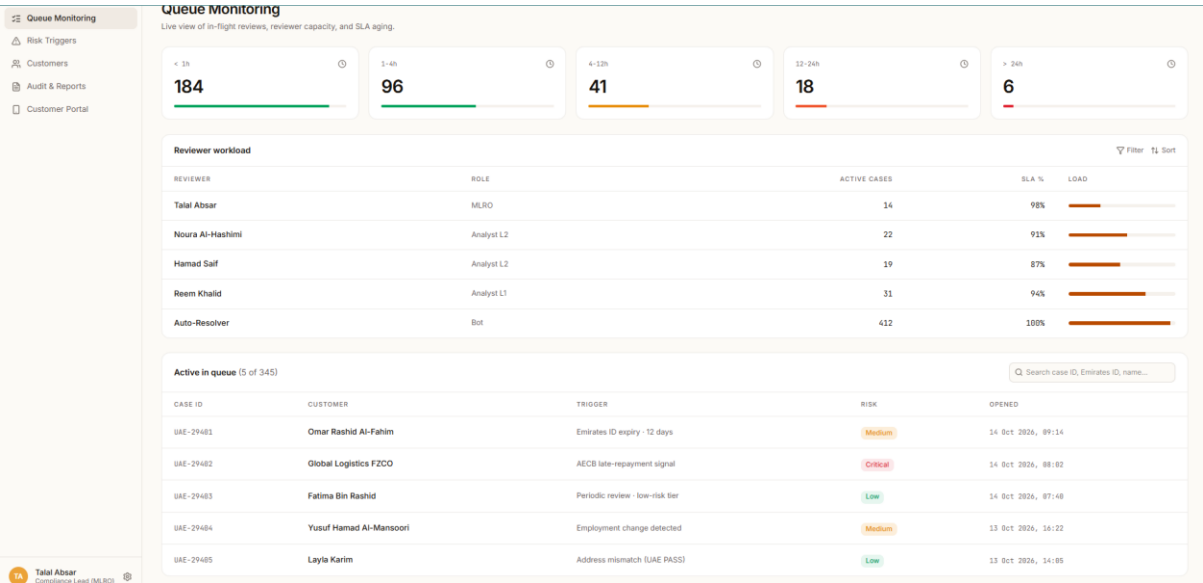

Screen 1 - Operations Dashboard

What This Screen Shows

Operations Dashboard: The main screen for the compliance team. At a glance it shows queue health at 98.4% Service Level Agreement compliance, 942 cases auto-resolved today, 112 awaiting customer action, and 47 in compliance review. The risk distribution panel on the right breaks down 412,889 retail accounts by risk tier. Arabic is visible in the panel heading confirming the platform is bilingual throughout.

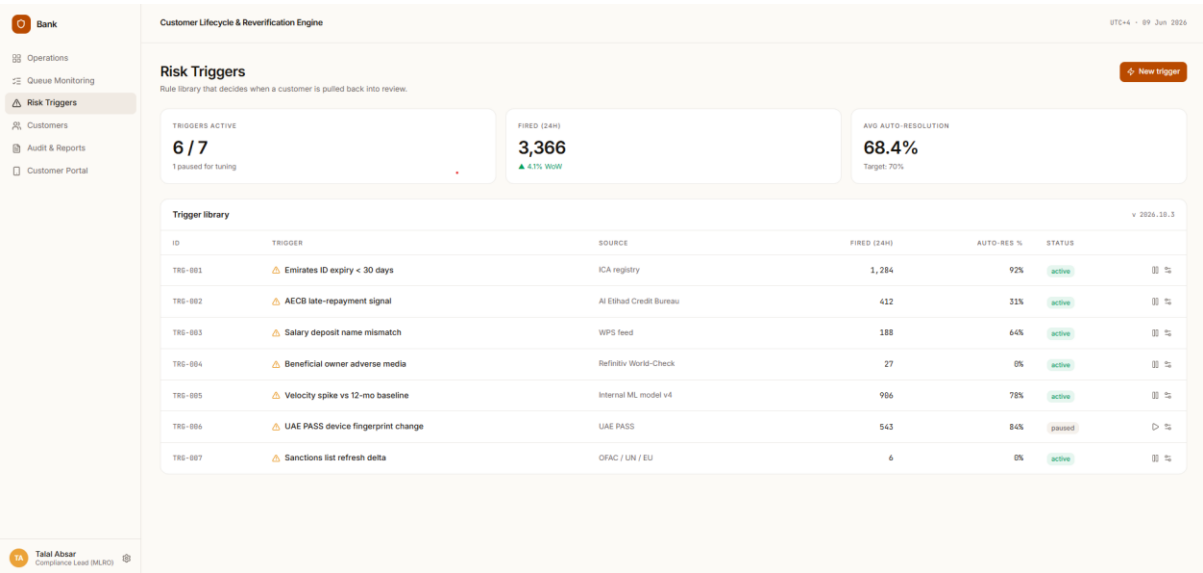

Screen 2 - Queue Monitoring, Live Reviewer Workload

What This Screen Shows

Queue Monitoring: A live view of every in-flight review case. The top section shows how many cases fall within each response time band, green for on track, red for approaching the limit. Below that, individual reviewer workload is visible alongside the Auto-Resolver bot which handled 412 cases. Each case in the queue shows its trigger, risk level, and the time it was opened.

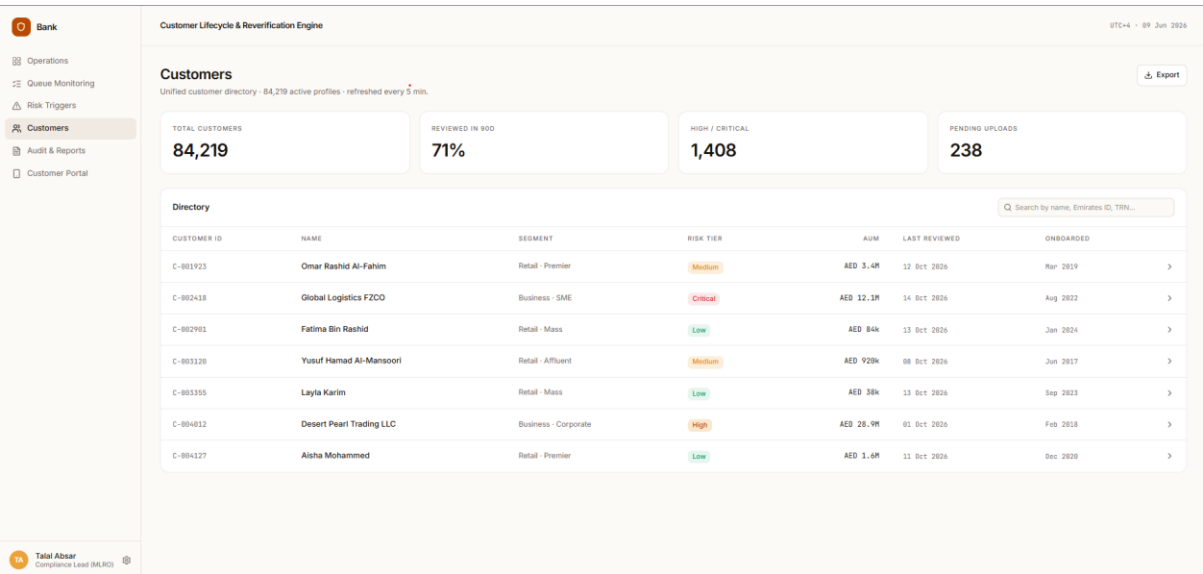

Screen 3 - Risk Triggers - Trigger Library and Auto-Resolution Performance

What This Screen Shows

Risk Triggers: The rule library that controls when a customer is pulled into a review. Each trigger shows its data source, how many times it fired in the last 24 hours, and what percentage of those cases were resolved automatically. Emirates ID expiry auto-resolves 92% of the time. Sanctions list matches always go to human review.

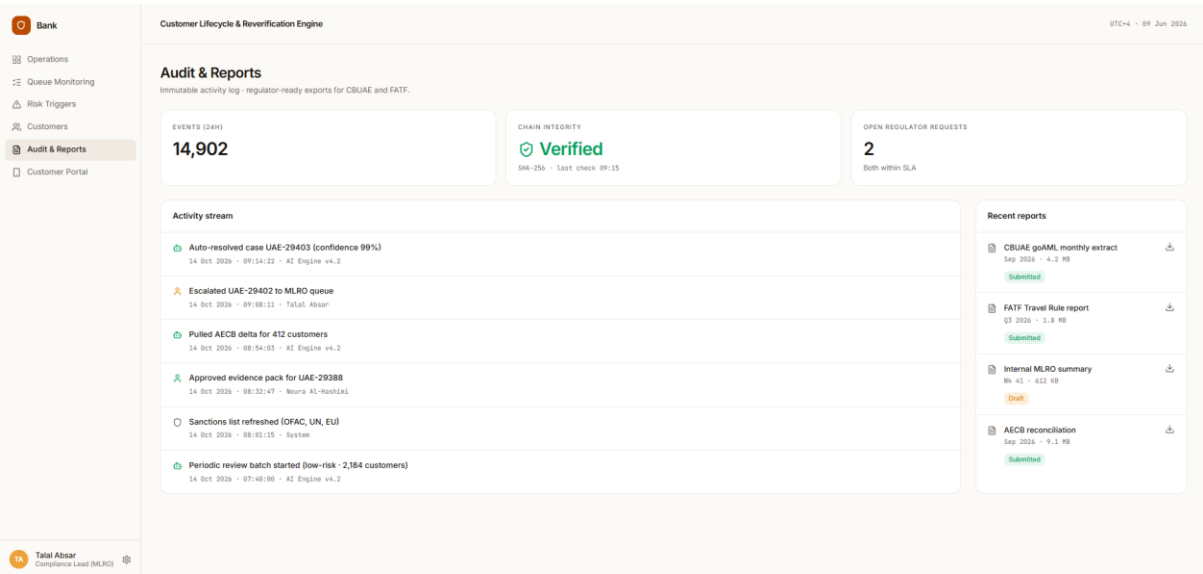

Screen 4 - Customers - Unified Customer Directory

What This Screen Shows

Customers: The unified customer directory showing all active profiles with their risk tier, last review date, and assets under management. Risk levels are colour-coded so the team can instantly see who needs attention. The directory is live, refreshed every five minutes, and searchable by name or Emirates ID.

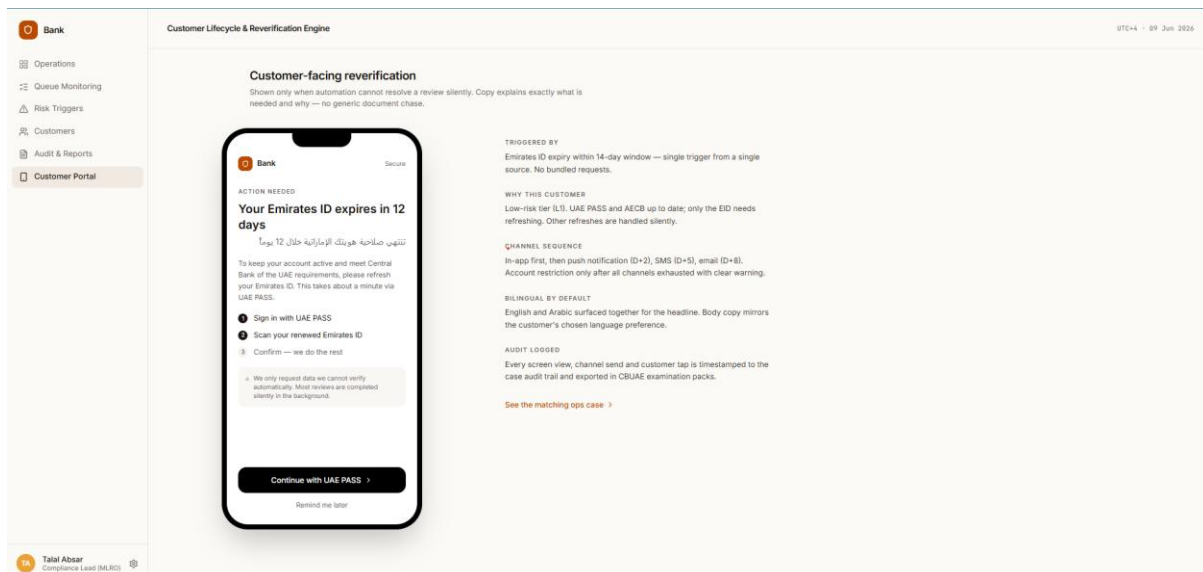

Screen 5 - Audit and Reports - Immutable Activity Log

What This Screen Shows

Audit and Reports: A real-time log of every action taken by the system and the compliance team. Each entry shows exactly what happened, when, and who or what was responsible. The right panel provides ready-to-download regulatory reports including the CBUAE goAML extract and FATF Travel Rule report. Chain integrity is verified continuously, shown as confirmed at the top of the screen.

Screen 6 - Customer Portal - Customer-Facing Reverification Journey

What This Screen Shows

Customer Portal: The customer-facing reverification screen shown only when the system cannot resolve a case automatically. In this example, a customer's Emirates ID is expiring in 12 days. The screen explains exactly why action is needed, in both English and Arabic, and offers a simple three-step process using UAE PASS. The customer is never asked for more than what the specific trigger requires.
